### DETAILED ACTION

1. Claims 1-10 are pending and have been examined.

#### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. **Claims 1-4 and 6-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Hurst et al. (US Patent 6,192,404, hereinafter Hurst).**

**Regarding claims 1 and 6,** Hurst teaches a method of determining proximity of a target node to a source node, comprising: communicating a query from the source node to the target node (**abstract, base node**), communicating a response from the target node to the source node (**abstract, receiving node response to base node**), receiving the response at the source node (**abstract, base node receives response**), determining a measure of query-response time between communicating the query and receiving the response (**abstract, TTL**), and determining the proximity of the target node based on the measure of query-response time (**abstract, base node determine distance**).

**Regarding claims 2 and 7,** Hurst teaches wherein determining the proximity includes comparing the query- response time to a threshold value that distinguishes between local and remote nodes (**col. 1, lines 45-67, determine local portion of wide area network, col. 10, lines 55-67, determining TTL distance, comparing**).

**Regarding claims 3 and 8**, Hurst teaches restricting communications with the target node based on the proximity (col. 10, lines 55-67, **determining not to send TTL messages**).

**Regarding claims 4 and 9**, Hurst teaches restricting communications with the target node based on the proximity (col. 10, lines 55-67, **determining not to send TTL messages**).

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. **Claims 5 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hurst.**

**Regarding claims 5 and 10**, Hurst teaches using TTL queries to determine the distance but is silent about wherein communicating the query and response is effected via a TCP/IP ping network command. However, Examiner takes Official Notice that the use of the command "ping" was conventional and well known and that one of the results of a ping command was/is the TTL value. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to use any command between nodes that resulted in a time-to-live result such as ping since Examiner takes Official Notice that it was conventional and well known.
